IMPORTANT INSTRUCTION FOR THE REWINDING & INSTALLATION OF EVO AC and EVO² AC GREENHOUSE FILMS

EVO AC and EVO² AC films have a very thin anti-dripping and anti-fogging coating on the external surface of the roll.

When rewinding a jumbo to produce cut-to-size rolls, we recommend that this is done with just one roller, at low speed and tension, to avoid destroying the coating by friction.

During installation on the greenhouse, it is imperative that the film is not dragged on the arches because friction may remove the coating and destroy the anti-dripping and anti-fogging properties. We recommend that you unroll the film by carrying the roll from one side of the greenhouse to the other so that the film falls freely on the arches.
